

Feed premix based on chelates for piglets

AminoCare PIGLETS

contains
chelates 

Guaranteed content: Amino acids, Cu- 7,9%, Zn-6,3%, Fe-6,3%, Mn-1,6%

Description and performance

AminoCare PIGLETS is a feed premix prepared on the basis of amino acids (chelates) for piglets. **AminoCare PIGLETS** is produced on the basis of Arkop's proprietary technology involving the use of chelates, i.e. microelement organic compounds with very high bioavailability whose quality has been proven by tests carried out by European laboratories. **AminoCare PIGLETS** effectively supplements element deficiencies, ensures correct development of the organism and enhances animal health. The chelates comprised in **AminoCare PIGLETS** are characterized by a very high level of chelation which makes it possible to provide the animal organism with such indispensable micro-elements as zinc, manganese, copper and iron, in proportions selected especially for piglets.

Application of AminoCare PIGLETS ensures:

- Lower susceptibility to infections and diseases (diarrhea)
- Reduced susceptibility to stress, especially during weaning
- Correct development of the skeletal system
- Limited cannibalism
- Improved meat quality
- Better growth
- Perfect bioavailability of micro-elements, especially Fe

Composition

- Contains amino acids

Microelement:	Zinc - Zn	Manganese - Mn	Copper - Cu	Iron - Fe
Contents:	6,3%	1,6%	7,9%	6,3%

Dosage

- 700g/ton of feed

On our customers' request we can prepare premixes enriched by vitamins and additional amino acids.
